

Reach-In Door Handle Location

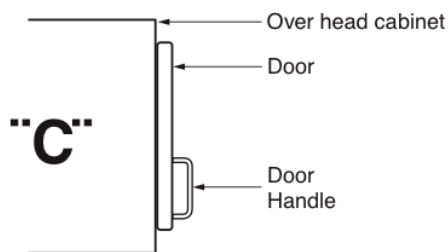

When ordering custom made reach-in doors, you may need to indicate where the door handle height should be placed. Remember, your customer will have to reach for this handle dozens of times each day — so why not have us build your new door with the handle placement set to a convenient height?

Suggested Location for CHEST HIGH to waist high door handle placement. Handle is mounted at center of door.

Suggested Location for UNDER COUNTER door handle installation. Handle is mounted at top of door.

Suggested Location for OVERHEAD door handle installation. Handle is mounted at bottom of door.
